HARAMAYA UNIVERSITY

COLLEGE OF COMPUTING AND INFORMATICS • DEPARTMENT OF INFORMATION TECHNOLOGY

Course: Mobile Application Development | 4th Year, 1st Semester (Section A)

MOBILE APPLICATION PROJECT TITLE

EthioIT ExitPrep: An Offline-First Mobile Learning and Adaptive Mock-Exam Platform for Ethiopian BSc Information Technology Students

1. Project Description & Objectives

EthioIT ExitPrep is an Android and cross-platform mobile application built to prepare fourth-year BSc Information Technology students in Ethiopia for the national exit exam defined by the FDRE Ministry of Education National Exit Exam Blueprint for Information Technology. Because graduating students face fragmented study materials and exam anxiety (Haramaya University Exit Exam Study), the platform unifies structured revision, practice testing, and competency tracking across all 5 core themes and 13 selected IT courses (45 credit hours, per the BSc IT Exit Exam Blueprint) so students master their coursework and sit for the national exam with confidence.

2. Core Application Features & Technical Scope

- **Blueprint-Aligned Study Modules:** Delivers concise course notes and flashcards across Programming, Database Systems, Web/Mobile Development, Networking & Security, and System Administration.
- **Timed Mock Exam Simulator:** Provides topic quizzes and full-length timed mock exams mirroring the national exam format with instant scoring and step-by-step answer rationales.
- **Competency & Readiness Analytics:** Tracks student accuracy across cognitive, technical, and professional outcomes to identify weak courses and guide targeted revision.
- **Offline-First Mobile Architecture:** Uses Flutter/Android and local SQLite storage so students can study notes, bookmark questions, and take practice exams anytime without internet access.

3. Group Members

No.	Full Name	ID Number
1	**Asladin Abdikadir Abdii**	0172/15
2	**Burka Jemal Mume**	2807/16
